

# WHO Drug Information

---

## Contents

### General Policy Topics

- HIV: will effective treatment demand early diagnosis? 193

### Update on AIDS

#### 1. Antiretroviral drugs

- The cellular biology of HIV replication 196  
 Nucleoside analogues 196  
 The potential of combination therapy 197  
 Other enzyme inhibitors 197  
 The case for early intervention 198  
 Some ground rules for effective antiretroviral therapy 198

#### 2. Vaccines and genetic manipulation

- The immune response to HIV infection 201  
 Fundamental problems in vaccine development 202  
 Recombinant subunit vaccines: fresh doubts on feasibility 203  
 Attenuated vaccines: feasibility and risks 203  
 A re-evaluation of strategy 204  
 New avenues of research 204  
 The potential of gene therapy 204  
 Prospects for immune restitution 205  
 Rapid progress with nucleic acid vaccines 205  
 A globally-relevant option? 205

### Reports on Individual Drugs

- Acetylsalicylic acid: a protective effect against colorectal cancer 210  
 Nucleoside analogues: premonitory experience in therapy of viral hepatitis 212  
 Amphotericin: a candidate for first-line treatment of visceral leishmaniasis? 215

### General Information

- Polypharmacy, parenteral treatment, and blood-borne infection 217  
 Increasing concerns about pneumococcal drug-resistance 217

### Regulatory Matters

- Nifedipine: danger of short-acting formulations 220  
 Oral contraceptives and thromboembolism 221  
 Naftidrofuryl infusion withdrawn 222

### Essential Drugs

- WHO Model List (December 1995 revision) 223

### Proposed International

- Nonproprietary Names: List 74** 235
