HEALTH ORGANISATION

RESOLUTION OF THE SUB-COMMITTEE ON ALKALOIDS
CONCERNING TOTAQUINA.

The sub-Committee on Alkaloids takes note of the Report CH/Malaria/183 on the standardisation of Totaquina and expresses its thanks for the work of the Experts.

The sub-Committee agrees that the protocol of analysis established by the experts characterizes the two types of Totaquina and that this protocol can be communicated to the Committees of the Pharmacopoeias of the interested countries.

It is of opinion that investigations on human malaria (artificially induced malaria, natural malaria) should be carried out in accordance with an established plan, with samples from the same source and prepared with the same methods.

It would be desirable to obtain rapid information as to the quantity of products of types A, B, C and H of the Experts' report, which could be now or in a near future placed in the hands of selected investigators.
