STUDIES ON MALARIA AND RESPONSES OF ANOPHELES BALABACENSIS BALABACENSIS
AND ANOPHELES MINIMUS TO DDT RESIDUAL SPRAYING IN THAILAND

PART II: POST-SPRAYING OBSERVATIONS

by

I. A. H. Ismail, V. Notananda and J. Schepens

CORRIGENDUM

Page 7, under 4.1.10 Vectorial capacity, the second paragraph should read as follows:

Under the conditions prevailing in the study area, data on the human blood index could not be obtained (see section 4.1.5), and therefore hypothetical values were used for this index: 0.9 for A.b. balabacensis (deviation to animal hosts after spraying considered to be nil) and 0.8 for A. minimus (allowing a deviation of 0.2 in favour of animal hosts after DDT spraying).

Page 8, under (d) Primary attacks, 3rd line

79% instead of 72%
