INSECTICIDE RESISTANCE AND VECTOR CONTROL

Tenth Report of the Expert Committee on Insecticides

	Page
1. Introduction	3
2. Behaviouristic resistance	6
3. Establishment of standard test methods for determining the susceptibility or resistance of insects to insecticides	7
4. Bio-assay of insecticidal deposits on wall surfaces	10
5. Bio-assay of aerosols used in the disinsectization of aircraft	11
6. Pyrethrum in vector control	12
7. Recommended methods for vector control	12
Annex 1. Instructions for determining the susceptibility or resistance of adult mosquitos to insecticides	15
Annex 2. Instructions for determining the susceptibility or resistance of mosquito larvae to insecticides	25
Annex 3. Provisional instructions for determining the susceptibility or resistance of fleas to insecticides	30
Annex 4. Provisional instructions for determining the susceptibility or resistance of adult bedbugs to insecticides	35
Annex 5. Provisional instructions for determining the susceptibility or resistance of adult sandflies to insecticides	40
Annex 6. Provisional instructions for determining the irritability of adult mosquitos to insecticides	46
Annex 7. Instructions for the bio-assay of insecticidal deposits on wall surfaces	50
Annex 8. Recommended methods for vector control	54
